Homework 1
Due: January 23

January 9, 2024

Choose a security problem that you are interested in. Create a system-level diagram of the problem as demonstrated in class. Be prepared to present your work at the beginning of next class.

Notes:

1. Systems are not processes! A process can be thought of as a path *through* a system. The implication here is that there should be no element of ordering or time involved in your systems diagram.
